

ATIGROUP

Energy & Systems Solutions

Gratiot Integrated Community Health, St. Louis

As a long time solutions provider for Gratiot CMH, ATIGROUP was asked to provide the engineering and architectural services along with the construction management services for Gratiot Integrated Community Health renovation in Saint Louis, MI.

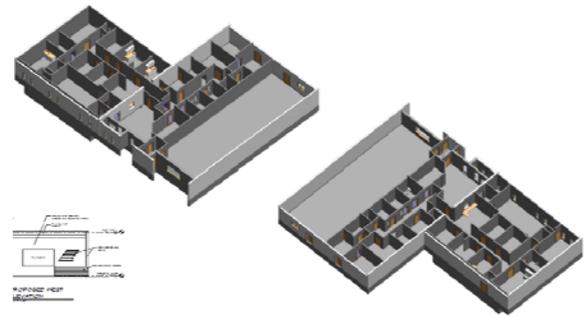

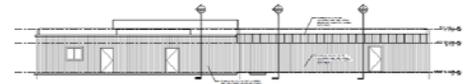

ATIGROUP selected an Architectural partner and provided Engineering & Construction Management services in house. ATI oversaw all aspects of the building renovation as the Owners Representative dealing directly with the owner and communication amongst all trade partners, and meeting the client's needs while staying within the budget and on time with the renovation deadline.

Gratiot's main branch is in Alma, Michigan and needed to expand to better serve their clients by eliminating the surrounding areas coming into the main branch in Alma, for services.

The renovation consisted of converting an old doctor's office into an outpatient clinic for the network. The new design included all architectural, mechanical, electrical, plumbing roofing, windows and up to date code compliance for the facility. . The project started in October, 2017 and the ribbon cutting ceremony was on May 10th, 2018.

This facility was a great challenge for a great cause as it is the first facility for Gratiot Integrated to serve the autistic community. ATIGROUP had to take this into consideration while providing design, integrating specific lighting which was dim and soundproofing the walls so there was no interruption in the services being provided.

As this project was a success and ATIGROUP continues to provide professional services for this customer at their locations maintaining their mechanical, electrical, & plumbing systems to ensure their costs stay down and their investments last their useful life expectancy.
